

# INSTRUCTIONS

---

Find attached two files. One of the attachments is a mockup on some proposed updates to our homepage. The other file is the layered PSD.

## TASKS

Take the full-width hero section 'Drink Here Now' and code up that module.

- Export the necessary assets from the layered file.
- Host the page and images anywhere so we can see it.
- Make the page/module responsive - make sure the background image scales nicely, the map is still useable on mobile, and the text is easily readable on Iphone5.
- Link the cities to separate pages (links don't matter for now where they go).
- (The pick a city) graphic is not a button, by the way.
- Oswald is the font for the text on the map.

**Send the test to [mcarmona@outcoding.com](mailto:mcarmona@outcoding.com) with a copy to [mborbon@outcoding.com](mailto:mborbon@outcoding.com).**
